

MON HEALTH

Elkins, West Virginia

Mon Health Elkins is an approximately 7,700 sf facility located in Elkins, West Virginia. The building serves as the primary cardiovascular clinic for the Mon Health System in the central area of the state. There are 12 exam rooms, a full cardio rehab gym, stress, ultrasound and echo lab and flexible space to house a future nuclear treatment component.

It is considered to be a Business Occupancy classification but several more stringent healthcare standards were considered and incorporated to meet the client's needs. Along with thoughtful layout encouraging efficient employee work flow, the design is focused on patient experience and includes a warm interiors package with local artwork.

The building exterior consists of low maintenance claddings and creates pedestrian friendly scale and aesthetic design to conform with the Building Covenants and Standards for the Elkins Railyard.
